DETAILED ACTION

Double Patenting

1. A rejection based on double patenting of the "same invention" type finds its support in the language of 35 U.S.C. 101, which states that "whoever invents or discovers any new and useful process ... may obtain a patent therefor ..." (Emphasis added). Thus, the term "same invention," in this context, means an invention drawn to identical subject matter. See *Miller v. Eagle Mfg. Co.*, 151 U.S. 186 (1894); *In re Ockert*, 245 F.2d 467, 114 USPQ 330 (CCPA 1957); and *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970).

A statutory type (35 U.S.C. 101) double patenting rejection can be overcome by canceling or amending the conflicting claims so they are no longer coextensive in scope. The filing of a terminal disclaimer cannot overcome a double patenting rejection based upon 35 U.S.C. 101.

2. Claims 1-18 are rejected under 35 U.S.C. 101 as claiming the same invention as that of claims 1-18 of prior U.S. Patent No. 6,230,203. This is a double patenting rejection.

3. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

4. Claims 19-28 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 19, 20, 22, 23

Art Unit: 2145

and 26-28 of copending Application No. 09/588,211. Although the conflicting claims are not identical, they are not patentably distinct from each other because they share the same claimed subject matter.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

6. Claims 19-28 are rejected under 35 U.S.C. 102(e) as being anticipated by Bowcutt et al. ("Bowcutt"), USPN 6,308,328.

7. Regarding claim 19, Bowcutt discloses a method of providing statistics for billing users of data services provided over a cable television network comprising the steps of:

monitoring session duration of a link to a network access device and storing data related thereto [Bowcutt, col. 3, lines 2-28, col. 9, lines 17-65 and col. 19, line 63 – col. 20, line 3];

monitoring amount of data transferred to and from a network access device and storing data related thereto [Bowcutt, col. 3, lines 6-28 and col. 19, lines 5-15]; and

monitoring amount of data lost in the link and storing data related thereto, the statistics permitting a flexible billing structure [Bowcutt, col. 3, lines 44-55 and col. 19, lines 33-52].

8. Regarding claim 20, Bowcutt further discloses the step of monitoring and storing the start time of the session [Bowcutt, col.9, lines 17-65 and col. 19, line 63 – col. 20, line 3].

9. Regarding claim 21, Bowcutt further discloses the steps of subtracting the amount of lost data from the amount of transferred data to obtain an amount of actual data transferred and billing proportional to the amount of actual data transferred and session duration [Bowcutt, col. 3, lines 2-28 and col. 19, lines 53-62].

10. Regarding claim 22, Bowcutt further discloses the steps of recording the address of the network access device and of apparatus to which the network access device is linked during the session [Bowcutt, col. 6, lines 36-49].

11. Regarding claim 23, Bowcutt further discloses the step of providing a plurality of service tiers depending on maximum shared bandwidth or bit rate [Bowcutt, col. 2, lines 31-45 and col. 9, lines 17-65].

Art Unit: 2145

12. Regarding claim 24, Bowcutt further discloses the flexible billing structure comprises a fee determined by amount of actual data communicated during a session [Bowcutt, col. 3, lines 44-55].

13. Regarding claim 25, Bowcutt further discloses the step of monitoring quality of service provided a subscriber determined by additionally monitoring jitter and delay [Bowcutt, col. 7, lines 14-60].

14. Regarding claim 26, Bowcutt further discloses the step of storing preauthorized level of service data for subscribers, an administration computer communicating the preauthorized level of service data to a link access controller for regulating service at the preauthorized level [Bowcutt, col. 8, lines 11-25].

15. Regarding claims 27 and 28, Bowcutt further discloses the step of receiving parametric statistical data for a session of a network access device at an administration computer, wherein the parametric statistical data comprises amount of data transferred and amount of data lost [Bowcutt, col. 3, lines 44-55 and col. 19, lines 5-52].
